FUMITE OPP: UNIQUE DISINFECTANT SMOKE GENERATOR WITH PROVEN VIRUCIDAL EFFICACY

FUMITE OPP (2-PHENYLPHENOL) is a general surface disinfectant used in domestic, medical, agricultural, commercial and industrial premises. Fumite OPP smoke generators produce a dry disinfectant smoke which is effective against viruses, bacteria, and moulds.

The active ingredient is carried throughout the treatment area via the smoke and comes into contact with all surfaces in the room and treats both surfaces and air. In this way it gets onto any hard to reach areas that normally wouldn't be penetrated by a traditional aerosol disinfectants.

Fumite OPP requires no specialised fumigation equipment.

Fumite OPP (2-Phenylphenol) has been successfully tested against the following organisms:

- **VIRUSES: Influenza A H9N2** 4 log reduction (99.99%) and 10% organic matter.
- **BACTERIA: *Staphylococcus aureus*, *Escherichia coli* and *Pseudomonas aeruginosa*.** Fumite OPP obtained a significant kill rate of >99.9% against all viable bacterial cells.
- **MOULD: *Aspergillus fumigatus*.** Fumite Opp obtained a significant kill rate of >99.9% against *A. Fumigatus*.

Although Fumite OPP has not yet been tested for Coronavirus or Vaccinia Virus (which is the accepted surrogate for SARS CoV 2). However, it has been tested successfully against the Avian Influenza Virus which forms part of the Coronaviridae family.

Fumite OPP is registered with the National Regulator for Compulsory Specifications (NRCS) with the registration number: Act5GNR529/261740/120/1048.
